- ※1 : When the 3.5mm plug is connected to focus/iris terminal on Panasonic cameras, only the remote control manual mode is available, regardless of the camera's auto/manual mode.
- ※2 : As for some of the Panasonic cameras released after August 2009, connecting the 3.5mm plug to focus/iris terminal makes the function fixed to auto iris mode, and disables the manual mode.
- ※3 : Tested by the standard kit lens.
- ※4 : Operable by micro four thirds lenses.
- ※5 : Additional A-3AV conversion calbe is needed for the AV REMOTE Terminal.
- ※6 : Only optional zoom lens E PZ 18-200mm F3.5-6.3 OSS : SELP18200 is good with latest firmware.
- ※7 : The "On" button on the remote does not work when the camera is off.
